PROFILE

Software Engineer focused on automation, internal tooling, and systems integration.

Experienced in building Python/Ruby-based automation systems, infrastructure tooling, and internal developer workflows for large-scale technical environments.

EXPERIENCE

System Administrator, Epic; Verona, WI — *August 2022 - Current*

- Built internal automation tooling in Python and Ruby to reduce repetitive system administration work and improve operational efficiency.
 - Designed and implemented automated system health check frameworks, reducing manual validation time by 15+ hours per week.
 - Developed tooling to support backup and restore testing workflows, improving reliability and reproducibility of system recovery processes.
 - Built scripts and integrations combining SQL data, Outlook calendar APIs, and ServiceNow REST APIs to automate maintenance scheduling and operational coordination.
 - Contributed to internal software development efforts, including code review, unit testing, and QA of automation systems and infrastructure tooling.
 - Collaborate across engineering teams to execute scheduled system maintenance and ensure smooth operation of large-scale hosted environments.
-

SKILLS

- | | |
|--|---|
| • System scripting & tooling development | • Infrastructure automation (Puppet, Bolt) |
| • Python, Ruby, Go, TypeScript, C# | • Linux Systems |
| • Git/GitLab/GitHub | • API Integration (REST, GraphQL, internal platform APIs) |
-

EDUCATION

Colby College Waterville, ME — Bachelor of Arts Computer Science, 2022

- 3.7 GPA
- Graduated with Distinction in Major.
- Double Major in Music Interdisciplinary-Computation culminating in a capstone project to produce video that represents audio features using a state-of-the-art neural network.
- Minor in mathematics with an emphasis in applied math and statistics.
- 2021 Summer Research Intern: HCI art installation.
